introduces you with...

*ARTIFICIAL ACROBATIC COURSES*

## Artificial Adventure Parks: A new concept

Artificial acrobatic courses offer “adventurers” a moment of escape and unrivalled overtaking opportunities.

Our structures can be set up on any site and therefore offer a high degree of flexibility.

The participants can act like Tarzan and enjoy the sensations of “fearing emptiness and falling down”, while remaining safe at all times.

This new attraction is a self carrying, dismantlable and adjustable structure from 2.5m to 10 metres in height. Children, adolescents and adults are able to experience infinite possibilities, due to the rearranging potential of the play stations.

## Optimal safety with the permanent lifeline

The permanent life line is a continuous cable which follows the user from start to finish. The user benefits from safety and comfort during use.

Children and adults are attached to this cable by a unique carriage, which runs the whole length of the course. This carriage offers complete safety, as it can't be accidentally unclaspd.

- . Optimizes safety: non-existent falling risk
- . Strongly reduces supervision needs
- . Increases the fluidity of the race course by 30%

## Event Structures

Our structures are completely dismantlable and can therefore be adapted to all types of Indoor and Outdoor sites, for any duration of time.

A "standard" 6 games station structure can be installed in less than 3 hours and dismantled in 2 hours. We also have the ability to integrate the design of our ropes, to encompass the animations of the courses.

Each module measures up to 4x3x4m and the structures can be configured in different ways:

- . 6 games (2 modules) = 12x5m
- . 8 games (3 modules) = 16 x5m
- . 10 games (4 modules) = 20x15m

The 6 games version has the capacity to accommodate up to 24 people!

## Fixed Structures

Easily dismantlable, the 2.5m to 10m high structures have the capacity of being permanently installed both indoors and outdoors.

- . Playground structures of 2.5m high with a shock absorber ground, don't have a life line and therefore require the supervision of a parent.
- . Structures of 6m to 10m high, with self assured permanent life line, require one operator for equipment inspection, briefing and supervision.

The daily capacity of the 2.5m structure is up to 1,000 passages, whilst the 6m to 10m structure is 300!

## Ready to use, in wood or acid

Thanks to their interchangeable capacity, the games stations can be changed indefinitely, to modify the difficulty and visual aspect of the whole structure.

We have a catalogue of over thirty different games stations! These include:

- . Low play stations: fixed under the platforms. These devices are horizontal and relatively simple to cross over.
- . High play stations: fixed at head post level. They are very distinctive due to their vertical form. These play stations offer a wide variety of difficulties for the user to choose from.

All our structures are built in heat-treated pine wood. This natural, rot proof larch wood is free of acid or colors. It fully complies with EN 15567-1 construction and safety requirements.
